Abstract

State the problem, explain the gap in prior work, summarize your approach, and report the main findings. Replace this paragraph with a self-contained abstract. This template contains illustrative formatting examples only.

Project page: <https://example.com>

Code: <https://github.com/your-org/your-repo>

Models and data: <https://huggingface.co/your-org>

1 Introduction

Introduce the research question and explain why it matters. Describe the limitations of existing approaches and summarize your contributions. Section 3 illustrates an equation, and Section 4 illustrates a table and a figure.

2 Related Work

Organize prior work by the ideas most relevant to your research question. A textual citation looks like Vaswani et al. [1], and a parenthetical citation looks like [1].

3 Method

Define the task, notation, assumptions and approach. For example, a generic empirical objective can be written as

$$\mathcal{L}(\theta) = \frac{1}{N} \sum_{i=1}^N \ell(f_{\theta}(x_i), y_i), \quad (1)$$

where N is the number of examples, f_{θ} is a parameterized model and ℓ is a loss function.

4 Experiments

4.1 Experimental Setup

Describe datasets, baselines, evaluation metrics, implementation details and computational resources.

4.2 Results

Table 1 and Figure 1 are formatting examples. Dashes are placeholders, not measured values.

*Equal contribution.

†Corresponding author.

Table 1: Example results table. Replace the method names, metrics and placeholders.

Method	Metric A $\uparrow$	Metric B $\uparrow$
Baseline	—	—
Proposed method	—	—

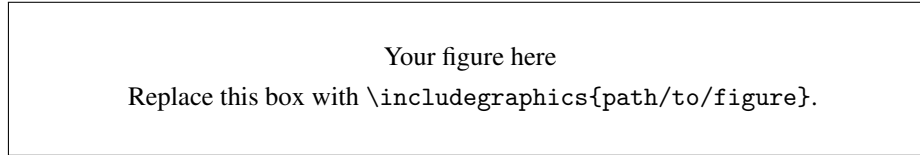

Figure 1: Example figure placement. Describe the figure and its key takeaway.

5 Conclusion

Summarize the main contribution and findings, and identify directions for future work.

Acknowledgments and Disclosure of Funding

Add funding acknowledgments and recognize contributors as appropriate. Remove this section if it is not needed.
